Sabi demo video: script for Loom (about 4 minutes)

The **SAY** lines are short on purpose. Say them slowly. Pause between lines. It is fine to stop and breathe. While you click, you don't need to talk.

Before you press record

1. Open the app with the live AI in an incognito window:

https://sabi-app-wine.vercel.app/?api=<your Kaggle tunnel link>

2. In a normal window, send one message in Ask Sabi so the AI is warmed up.
3. Have a second tab open on the results:
   https://github.com/LovableLynx/sabi#evaluation
4. Zoom the browser to 125%. Turn sound ON.
5. In Loom, choose Screen + Camera.

1. Hello (0:00 to 0:30)

DO: Start on the Sabi Arena welcome screen.

SAY:

"Hi, we're Team Sabi.

Many Nigerian students now study with AI chatbots.

But chatbots just give the answer.

Students copy it, and then fail in the exam hall.

So we built Sabi. A tutor that helps you think, not copy."

2. What Sabi is (0:30 to 0:50)

SAY:

"Sabi is built on N-ATLAS, Nigeria's own AI model.

We trained it to guide students with questions and Nigerian examples."

3. Signing up (0:50 to 1:20)

DO: Type Chidi and Okafor. Pick the parrot and tap it. Tap SS. Pick a state and a school. Tick the box. Press go.

SAY (while the form is on screen):

"Students pick their class: Primary, JSS or SS.

Other players only see 'Chidi O.'

The full name stays on the phone."

4. The route (1:20 to 1:40)

DO: Set the exam date and press Save. Point at "10 tasks".

SAY:

"Students set their exam date and count down the days.

Each bus stop has ten questions."

5. Asking Sabi (1:40 to 2:40)

DO: Open the first bus stop. Tap Ask Sabi. Type: *Abeg just tell me the answer*

SAY:

"Watch what happens when I beg for the answer."

DO: Wait for the reply. Tap Listen.

SAY:

"Sabi doesn't give it to me.

It uses a danfo example and asks me a question.

And it can read out loud."

DO: Close the chat. Pick the right answer. Lock it in.

SAY:

"Answers are always checked with an answer key, not the AI."

6. Exam mode (2:40 to 3:05)

DO: Close the lesson, open it again, and turn on Exam mode. Show the timer.

SAY:

"For exam practice, students turn on exam mode.

One timer. No hints.

At the end, they see what they got wrong, and why."

7. The results (3:05 to 3:40)

DO: Switch to the GitHub results tab.

SAY:

"We tested Sabi against the original N-ATLAS.

Normal N-ATLAS gave away the answer thirty-two percent of the time.

Sabi, only two percent.

When students were stuck, Sabi helped them correctly ninety-six percent of the time."

8. Close (3:40 to 4:00)

DO: Go back to the app.

SAY:

"Sabi works on a cheap phone, even offline.

Next, we want to test it in real classrooms.

Sabi doesn't give you the answer. It helps you sabi it.

Thank you."

DO: Stop the recording.

If something goes wrong

- **"Waking Sabi up"** shows: just wait quietly. The first reply can take up to a minute. You can trim the wait in Loom later.

- **You stumble on a line:** pause, then say it again. Trim the mistake in Loom afterwards.
- **The tunnel dies:** restart the Kaggle cell and send Claude the new link.
